Security Testing

Proactively prevent security incidents

To help enterprises proactively identify vulnerabilities and security weaknesses, Onevinn passionately offers security testing solutions. Onevinn's offensive security services provide systematic and thorough security audits on your applications or infrastructure to provide you with clear understanding of your current security posture. Solutions that are available range from standardized penetration tests to more threat-oriented testing procedure such as Red Team engagements.

Maintain a proactive state of security and risk awareness with Onevinn's Security Testing:

Penetration Testing

Penetration Tests offer in-depth systematic security evaluations focused on systems, networks or applications where the goal is to identify weaknesses to further develop an organizations security posture.

Red Team

Red Team engagements stimulate the attack of a threat actor on your infrastructure, the packages we offer incorporate a range of attack vectors whereby we customize an engagement tailored to your organizational need..

Vulnerability Assessment

The Vulnerability Assessment solution utilizes vulnerability assessment tools to identify, evaluate and report on security weaknesses within your networks, applications or systems

Education

Onevinn's education solutions provide offensive security courses. We provide courses or presentations for schools and companies alike.
